# Introduction

This step-by-step guide is how I use some automated software to build backlinks to my Layer 1 sites that are created through the Step-By-Step Link Building Guide

**A word of warning:** Don't use these methods to backlink to your main site as that's a sure fire way to do more harm than good.

Make sure that you follow the Step-By-Step Link Building Guide before attempting to do any of these steps.

You also want to make sure that you have a solid base of backlinks to your money site first. Also, make sure to have your Layer 1 Web 2.0 websites all set up prior to doing any of these steps, as those will be the sites that you will be building these links to.

# Automated Link Building Guide

The software that I use to automate my Layer 2 backlinks is called [SEnuke](#).

[You can get a 14 Day FREE Trial of SEnuke By Clicking Here.](#)

Forget about everything you may or may not have heard about Senuke X, it's no longer relevant. Why, because Senuke XCr is a different animal altogether. It is more of an all-in-one SEO software than anything else on the market. If there is a website with links, more than likely SEnuke XCr can put a link on it.

SEnuke XCr and comes with some cool new features such as:

- 30 Second Turbo Wizard
- 3 New Modules
- Macro Recorder – Crowd Sourcing Portal for User Added Sites
- Google Places Citation Builder
- URL Link Checker
- New Templates for the Wizard

I've come to love the new 30 Second Turbo Wizard, as it makes setting up these automated backlinks a breeze.

For best results with the 30 Second Turbo Wizard, I highly recommend that you get a subscription to [Article Builder](#).

[Article Builder](#) is software that has been developed by Jon Leger that will allow you to write quality articles with just the push of a button. If you struggle when it comes to writing articles or simply don't have the time to get them all done - then this software will help you to easily write all the articles you need. There are no technical skills required - just follow along with the software to generate a high-quality article.

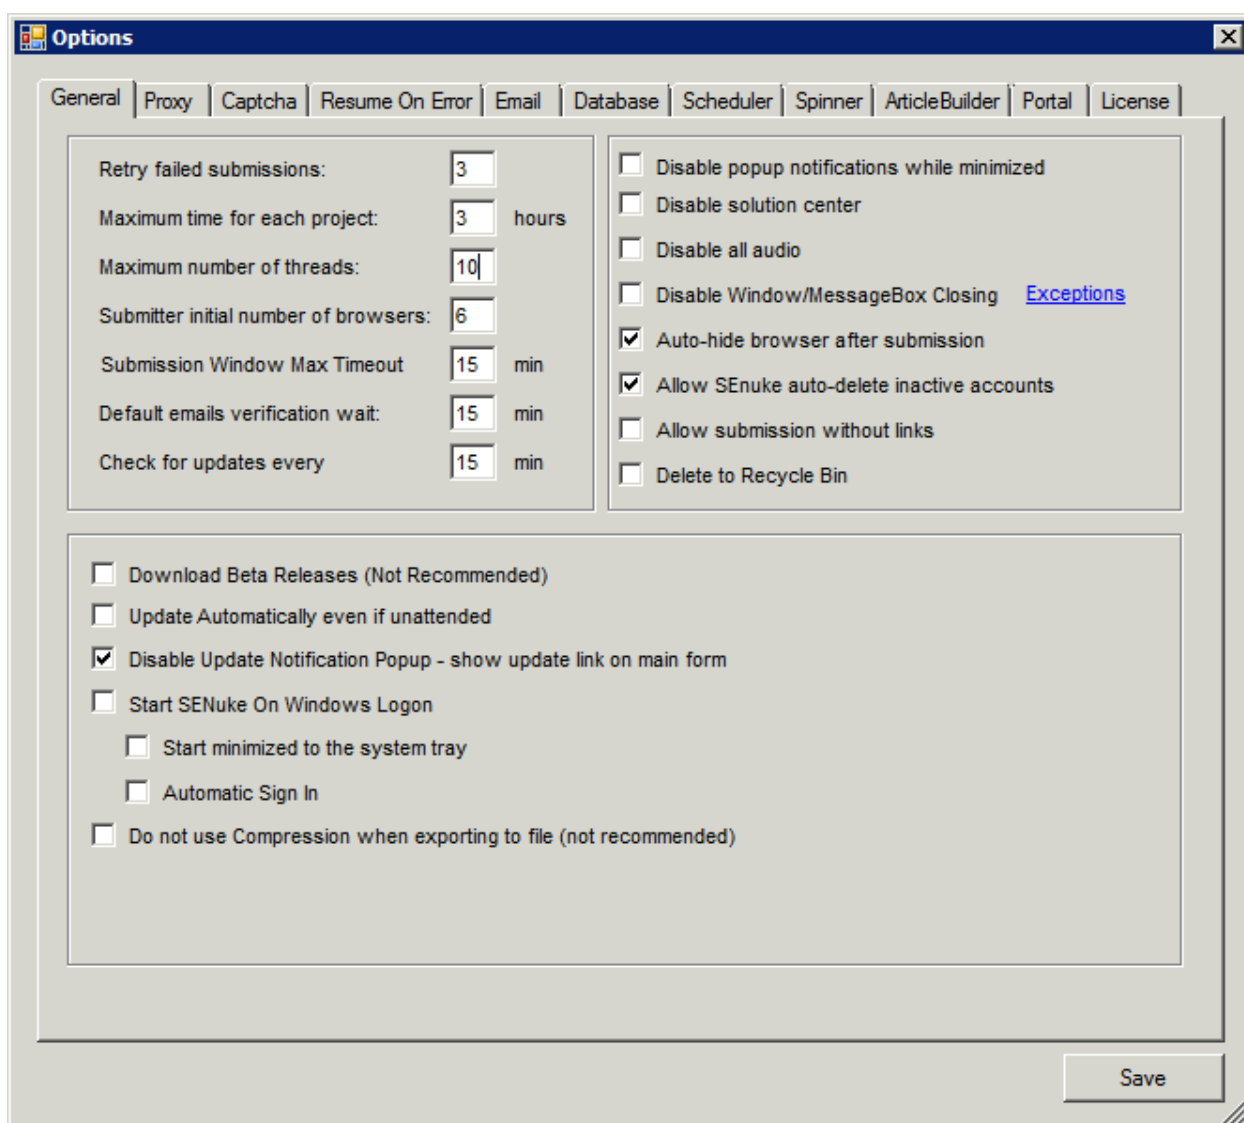

With [Article Builder](#) all you need to do is provide the topic and keywords that you want your article to revolve around. This is like PLR (private label rights) articles with a major twist - no one gets the same article. This software will take snippets of different articles and weave them into a concise and extremely readable article. This means that each and every article is perfect for ranking on the major search engines. Even if you used the same topic and keywords over and over you would get a unique article each and every time. Each and every article is guaranteed to be a minimum of 75% unique though the majority are 90% unique. But, unlike many article spinners out there, these articles are professional and actually readable.

What's cool about [SENUke XCr](#) is that the Turbo Wizard automatically connects with [Article Builder](#), so you don't need to leave SENUke to get the articles for your backlinks.

# SENUke XCr Quick Configuration

Out of the box SENuke XCr is configured to run pretty reliably, for your initial runs I suggest that you don't actually make changes to the number of threads or Windows etc.

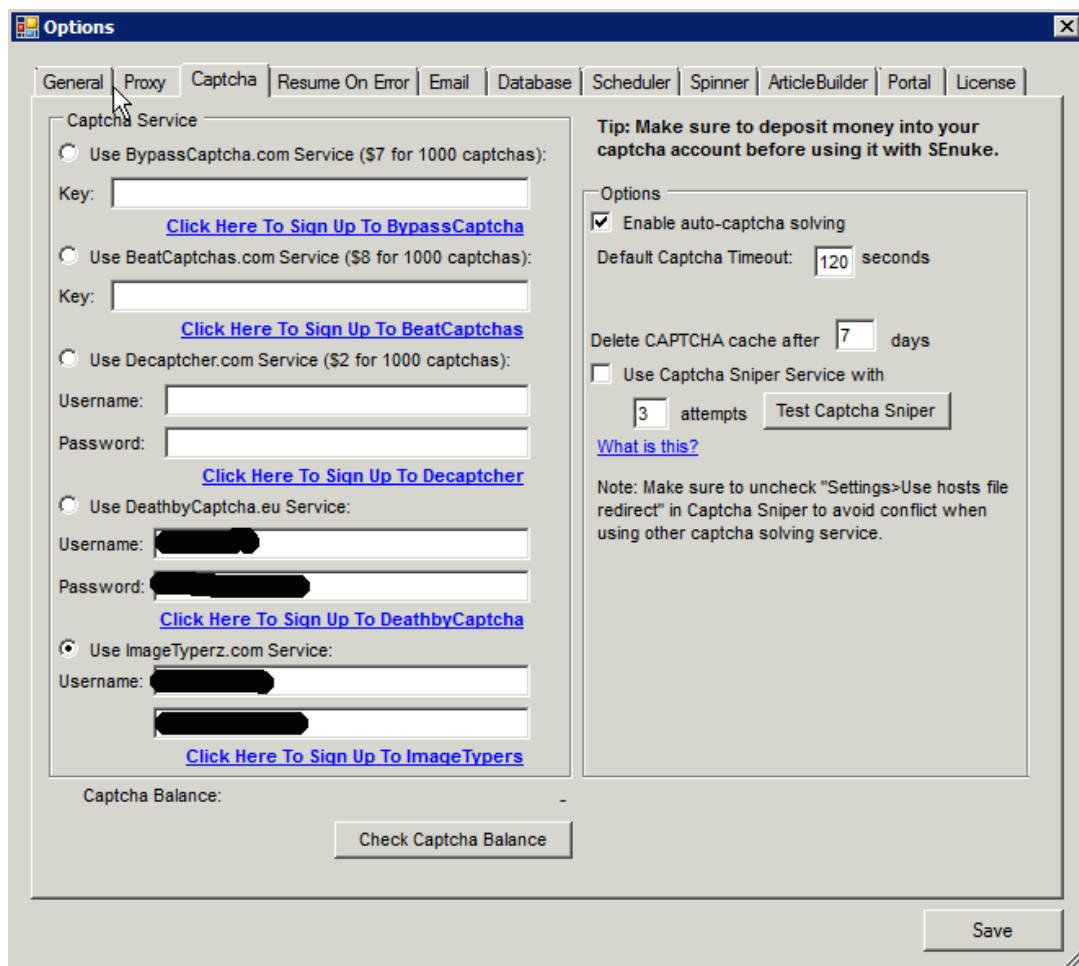

A typical configuration is shown below, you can see we have the threads and browsers set quite low. As SENuke can run 24/7 there is rarely any need to run it to the max.

There are a couple of important sections you will need to fill in, the first being the "Captcha" section.

In the Captcha settings you can set it up as we have here. If you own Captcha Sniper then you can also tick the box which says “use Captcha sniper service with”. However, initial trials have indicated that Captcha Sniper is only solving 5% of captchas because so many sites in SENuke use re-Captcha which it does not support.

I’ve been using [Decaptcher](#) for a long time and still have a good success rate with them.

The screenshot shows the 'Options' window for SENuke, specifically the 'Captcha' tab. The window has a title bar with 'Options' and a close button. Below the title bar are several tabs: 'General', 'Proxy', 'Captcha' (selected), 'Resume On Error', 'Email', 'Database', 'Scheduler', 'Spinner', 'ArticleBuilder', 'Portal', and 'License'. The 'Captcha' tab contains the following sections:

- Captcha Service:** Four radio buttons for different services:
  - ☐ Use BypassCaptcha.com Service (\$7 for 1000 captchas): Key: [text box] [Click Here To Sign Up To BypassCaptcha](#)
  - ☐ Use BeatCaptchas.com Service (\$8 for 1000 captchas): Key: [text box] [Click Here To Sign Up To BeatCaptchas](#)
  - ☐ Use Decaptcher.com Service (\$2 for 1000 captchas): Username: [text box] Password: [text box] [Click Here To Sign Up To Decaptcher](#)
  - ☐ Use DeathbyCaptcha.eu Service: Username: [text box] Password: [text box] [Click Here To Sign Up To DeathbyCaptcha](#)
  - ☒ Use ImageTyperz.com Service: Username: [text box] Password: [text box] [Click Here To Sign Up To ImageTyperz](#)
- Captcha Balance:** A text box showing a balance of 0 and a 'Check Captcha Balance' button.
- Options:** A section with a tip: 'Tip: Make sure to deposit money into your captcha account before using it with SENuke.' Below the tip are:
  - ☒ Enable auto-captcha solving
  - Default Captcha Timeout: [120] seconds
  - Delete CAPTCHA cache after [7] days
  - ☐ Use Captcha Sniper Service with [3] attempts [What is this?](#) [Test Captcha Sniper](#)
  - Note: Make sure to uncheck "Settings>Use hosts file redirect" in Captcha Sniper to avoid conflict when using other captcha solving service.

Next you want to click on the ‘Spinner’ tab and add in your [TheBestSpinner](#) account details if you have them, and again on the [Article Builder](#) tab if you have those.

Both of these are not required to run SENuke, but you will find them useful.

# How to Set Up a Basic Campaign in SENuke XCr

In this example we will be using a fake Web 2.0 site that I would have created if I were to use the target niche of credit cards. For the sake of this guide, <http://creditcards.wordpress.com>, will be used as our “money site”.

There are lots of different ways that we can “Nuke” our site, all depending on the age and previous backlink history of the site.

However, I still HIGHLY recommend that you only use SENuke and other automated back linking software to link to your Layer 1 sites and *never* to your real “money site”

For the sake of this guide we will be nuking the Web 2.0 site that we have setup.

Normally you would want to link to both your homepage and internal links, so for instance you would have the following as your links:

- <http://creditcards.wordpress.com>
- <http://creditcards.wordpress.com/article-1>
- <http://creditcards.wordpress.com/article-2>

For this example however we will just be linking to the home page.

- <http://creditcards.wordpress.com>

Now you will also need to prepare your keywords for the task.

It is a little known fact that your most important keywords should go first in SENuke. In some custom projects, only the first keywords will be used, so you want your best keywords there.

After the updates Google made in 2012 it is best to include a large number of keywords, and to include random generic keywords too like:

- Additional Info
- click to the web site
- similar site
- Learn More Here
- visit the following site
- Check This Out

One thing you must remember though is, the more 'extra' keywords you add, the more diluted your main keywords will be. To get around this you can copy in your main keywords a second or third time, thus your keyword list might now look like this:

- Credit Cards
- Credit Cards
- Best Credit Cards
- Zero APR Credit Cards
- Credit Cards for bad credit
- No annual fee credit cards
- Creditcards.wordpress.com
- Credit Cards
- Credit card comparison
- Credit cards with rewards
- Creditcards.blogspot.com
- Best credit cards
- This site
- Additional Info
- click for the web site
- similar site
- Learn More Here
- visit the following site

- Check This Out
- Visit this site

That will automatically create a good mix of keywords, with the main emphasis on 'Credit Cards' and then the credit card related keywords.

# SEnuke XCr Turbo Wizard Setup

The Turbo Wizard is new to SEnuke XCr and it allows you to build a campaign in seconds.

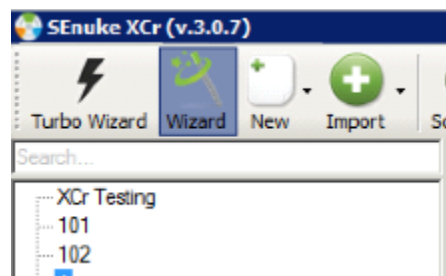

I want to make this very clear now though, if you are using the turbo wizard then you **must** be using [Article Builder](#) with it.

Article Builder supplies highly spun content that makes sense. The other method, which is even called “low quality”, supplies gibberish and has got Google penalty written all over it.

**Never use the “low quality” articles option!**

## Step 1

To get started with your turbo wizard campaign, click the Turbo Wizard Button as shown below:

Now you will be taken to the setup screen for the Turbo wizard.

## Step 2

What you will need are 3 of your Web 2.0 website URLs that you set up previously for your Layer 1.

Sticking with the “credit cards” niche, I take the first three web 2.0 sites I have in my list, which are as follows:

- <http://creditcards.wordpress.com>
- <http://creditcards.blogspot.com>
- <http://creditcards.tumblr.com>

And enter them into the “Money Site Details” box.

The maximum number of URLs that you can enter into the “Money Site Details” box is three. Also, it’s a good idea to use the URLs for your individual posts on these Web 2.0 sites as well.

### Step 3

You will also want at a minimum of 10 keywords like how I described them in the previous section, but I’ll post them here again for an example:

- Credit Cards
- Credit Cards
- Best Credit Cards
- Zero APR Credit Cards
- Credit Cards for bad credit
- No annual fee credit cards
- Creditcards.wordpress.com
- Credit Cards
- Credit card comparisson
- Credit cards with rewards
- Creditcards.blogspot.com
- Best credit cards
- This site
- Additional Info
- click for the web site
- similar site
- Learn More Here
- visit the following site
- Check This Out
- Visit this site

Notice that I’m using the 30-30-40 anchor text rule that was outlined in the main guide.

### 1. URL and related keywords: 30%

These anchor texts should include your URL (i.e. <http://bestcreditcards.com>) or related keywords like “Zero APR Credit Cards” or “Credit Cards with Rewards”.

### 2. Keywords you are trying to rank for: 30%

This is the exact match of your keyword you are targeting. For example, if your keyword is “best credit cards”, you want 30% of your anchor texts to be “best credit cards”.

### 3. Unrelated keywords: 40%

These are any phrases or unrelated keywords. These can be anchor texts such as “Click Here”, “This Site”, etc. This is the highest percentage and will help to keep the backlinks looking natural.

Below is a screen shot which shows what it should look like using the information we mentioned earlier.

**SEnuke XCr Turbo Wizard**

[Watch Demo Video](#)

**Money Site Details** ?  
 One URL per line (at least 1 URL required)  
 http://creditcards.wordpress.com  
 http://creditcards.blogspot.com  
 http://creditcards.tumblr.com

**Keywords to rank for** ?  
 One keyword per line (at least 1 keyword required)  
 Credit Cards  
 Credit Cards  
 Best Credit Cards  
 Zero APR Credit Cards

**Content Settings** ?  
 Tags (comma-separated): credit cards, credit report, bad credit  
☐ Use low quality content  
☒ Use high quality content (requires [ArticleBuilder](#))  
 Category: credit cards

**Campaign Name (optional)**  
 credit cards -Turbo Campaign

**Strategy Settings** ?  
 Template: ZontSEO.com - The Full Monty V4 Browse...  
 This template requires approx. 180 Article Builder Points.  
 # of profiles: 3 Start date: 10/ 1/2012  
 Spread submission over 7 days Start time: 11:21AM

**Create campaign!**

## Step 4

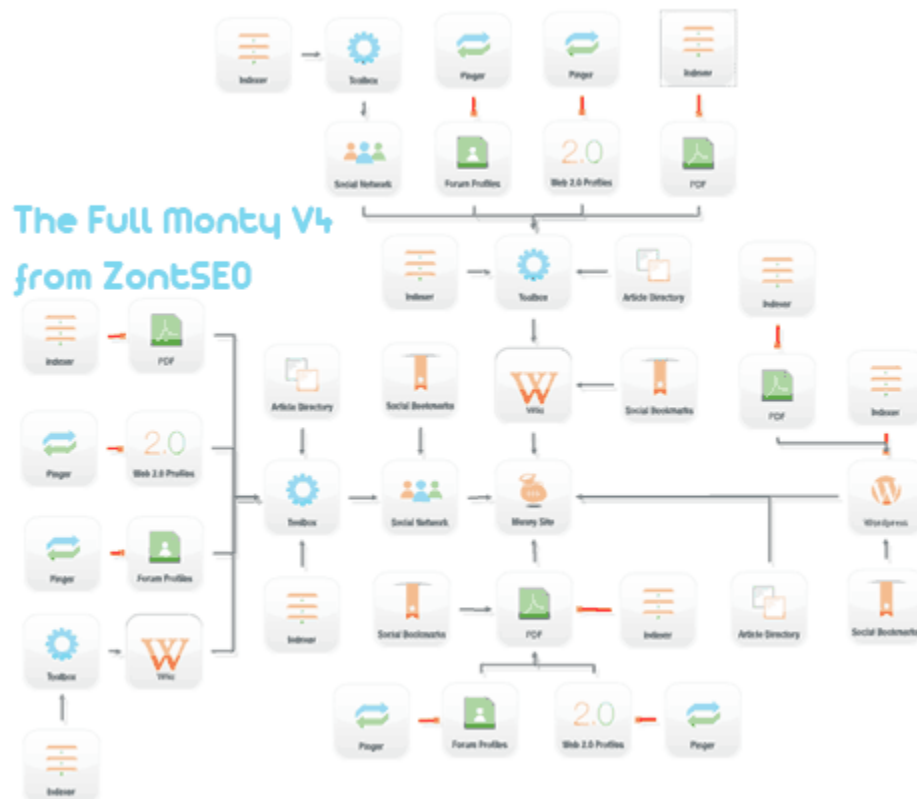

Now you need to select “high quality” which is where you use article builder. You enter your tags and select which category of articles you want to draw from [Article Builder](#), in this case it is “credit cards”.

## Step 5

Now you have to choose a template.

There are a bunch of different templates that come preinstalled with SeNuke, but I like to use the Full Monty V4 template.

Here's what the template looks like:

## Step 6

You also need to set the # of profiles to create

The number of profiles you need will depend on the template you pick, larger templates need 3. Smaller templates will need 1 or 2.

When using the Full Monty V. 4 Template there is one for 3 profiles and one for 1 profile. I use the full blown one that requires 3 profiles.

## Step 7

Now you need to set how many days to run the campaign.

I typically pick a period of 7-10 days to run the campaign. If you are really paranoid, go for a longer range to be safer

Note: Running a small template over 14 day time frame would be a bit of overkill.

## Step 8

Now all that is left is to press the create campaign button.

Let SENuke do its thing and after a minute or so you will have a fully populated campaign with anchor texts inserted into all the right places.

## Step 9

Repeat for all of the remaining Web 2.0 Sites that you have set up

## Bonus Step

Repeat the process for your shared videos to increase their rankings as well 😊

# Conclusion

As you can see, this becomes very easy to add backlinks to my Layer 1 sites, which will help build their authority and rankings as well, which will in turn pass the “link juice” onto your main website.

There are some initial costs involved with this process, but for the amount of time that it saves me on building backlinks to my Layer 1 sites and videos, it is well worth the extra cost.

To you success,

*Josh Precht*
